Summary

Software Engineer with 7+ years of experience building web, mobile and backend applications with TypeScript, React, Next.js, React Native and NestJS. At RAKBANK, built a shared design system and a project scaffolding CLI adopted across teams, and developed KYC and customer lifecycle platforms for personal banking. Delivers products end to end, from API and database design to CI/CD and deployment.

Skills

Languages: TypeScript, JavaScript, SQL

Frontend: React, Next.js, React Native (Expo), Vite, Redux Toolkit, React Query, React Hook Form, Tailwind CSS, MUI, shadcn/ui, Storybook

Backend: Node.js, NestJS, Express, TypeORM

Databases: MySQL, MariaDB, MongoDB

Testing: Jest, React Testing Library, Stryker (mutation testing)

Cloud & DevOps: Cloudflare R2, Docker, Nginx, PM2, CI/CD (GitHub Actions), SSL setup, Windows Server IIS

Auth: SSO with Azure AD / Microsoft Entra ID (MSAL), NextAuth

Architecture: Design systems, Atomic design, Feature-Sliced Design (FSD), Config-driven UI

Tools: Git, Bitbucket, Jira, Figma, GitHub Copilot

Experience

Senior Software Engineer (React.js)

RAKBANK, UAE (Remote) | Aug 2024 – Present

- Built the bank's Design Language System, a React component library now used across 4 to 5 applications, and an internal scaffolding CLI that makes new project setup 40% faster.
- Deliver KYC and customer lifecycle platforms for personal banking: the Personal Banking Group (PBG) platform, the Customer Outreach Portal and the config-driven CLM platform, all with Azure AD (Microsoft Entra ID) single sign-on.
- Maintain 80% unit test coverage with Jest and React Testing Library, and added mutation testing with Stryker to the organization's project templates.
- Review code regularly in an engineering team of 5+ on frontend, working with backend, design and product teams.

Software Engineer & Project Lead

LastingSales | Feb 2023 – Jul 2024

- Led the frontend rebuild of the company's lead management CRM in Next.js 14 and launched it in 6 months, owning the project from design through deployment and maintenance.
- Introduced TypeScript and coding standards to the frontend codebase, reducing development time by 25%.
- Reviewed code regularly and mentored junior developers.

Software Engineer

Brisk Solutions (Pvt.) Ltd. | Sep 2019 – Jan 2023

- Full-stack engineer on the company's ERP platform, working across the React frontend, Node.js backend and MySQL database, and reviewing code regularly.
- Increased operational productivity by 30% and reduced maintenance costs.
- Deployed and maintained applications on Windows Server IIS, wrote technical documentation and trained administrators and end users.

Education

Master of Computer Science (MCS)

Bahauddin Zakariya University, Multan | 2017 – 2019

Projects

Design Language System (DLS) | RAKBANK

Tech stack: React, Vite, MUI, Storybook, Day.js, Jest

- Designed and developed a React component library based on atomic design, now used across 4 to 5 RAKBANK applications.
- Covers the full component set a standard app needs, from text inputs, selects and autocomplete fields to complex components such as a custom calendar and data tables, with components documented in Storybook.

CLM (Customer Life Cycle Management) | RAKBANK

Tech stack: React, Vite, Redux Toolkit, React Hook Form, DLS, Azure AD / Entra ID (MSAL), Jest

- Developing a config-driven platform where every screen is rendered from JSON configuration on top of the DLS, so new screens are configured rather than hand-coded.
- Integrated Azure AD single sign-on with MSAL and built forms with React Hook Form.

Project Scaffolding CLI | RAKBANK

Tech stack: Node.js, Inquirer.js, Chalk, Jest, SonarQube

- Created an internal CLI tool that sets up new projects with the organization's folder structure, rules and tooling already in place, making new project setup 40% faster.
- Templates cover React, Next.js and Next.js with Feature-Sliced Design, with TypeScript, SSO through Azure AD / Entra ID (MSAL), mutation testing with Stryker and GitHub Copilot integration. Used across multiple projects in the organization.

PBG (Personal Banking Group) | RAKBANK

Tech stack: React, Vite, Redux Toolkit, React Hook Form, DLS, Azure AD / Entra ID (MSAL), Jest

- Delivered the Personal Banking Group platform used by the team serving personal banking customers, covering customer onboarding, KYC review and remediation workflows.
- Implemented state management with Redux Toolkit, complex forms with React Hook Form and Azure AD single sign-on, on top of the shared design system.

Customer Outreach Portal | RAKBANK

Tech stack: Next.js, React Query, React Hook Form, DLS, Azure AD / Entra ID (MSAL), Jest

- Developed a platform for managing customer communication around KYC and compliance, including sending KYC document requests, tracking customer responses and running outreach campaigns.
- Used React Query for server state, React Hook Form for complex forms and Azure AD for single sign-on, on top of the shared design system.

Lead Management CRM | LastingSales

Tech stack: Next.js 14, TypeScript, MUI, Redux Toolkit, NextAuth

- Rebuilt the CRM frontend from React to Next.js 14 and launched it in 6 months, running it in parallel with the existing alpha version.
- Implemented the frontend for lead consolidation from Facebook, websites and CSV imports, performance-based lead assignment, follow-up reminders, custom data fields, call-log integration and configurable sales funnel stages.
- Replaced traditional pagination with infinite scrolling.

ERP Platform | Brisk Solutions

Tech stack: React, Node.js, MySQL, Windows Server IIS

- Consolidated multiple .NET and MSSQL systems into a single platform covering finance, inventory, payables and receivables, and real estate.
- Developed a financial module for interactive viewing and printing of financial statements, and integrated financial transactions with the production modules.

- Delivered modules for inventory, payables and receivables, production, sales order import, real estate management with installment plans, and document and receipt management, with role-based access control across all modules.

Visual Quran | Freelance

Tech stack: NestJS, TypeORM, TypeScript, Cloudflare R2, GitHub Actions, Next.js, React Native (Expo)

- Designed and built the NestJS and TypeORM backend serving the web and mobile apps, with Cloudflare R2 for video and lecture storage and a GitHub Actions CI/CD pipeline for automated deployment.
- Contributed to the Next.js admin and school portals and the React Native (Expo) mobile app, including password-free pupil sign-in with QR codes and printable login cards.
- Developed a Quran reader for all 114 surahs with word-by-word Arabic, three script styles (Uthmani, IndoPak, Tajweed), English and Urdu translations, and navigation by surah, ruku, ayah or page.
- Created lesson and quiz builders and role-based portals for platform admins, school admins, teachers and pupils, covering licences, classrooms, homework assignment and progress tracking.

Other Freelance Projects

- **PharmEx DMS:** Pharmacy distribution management system with dashboards for orders, stock, deliveries and finances, batch-wise stock tracking, detailed ledgers, and sales, purchase and stock reports.
- **Hospital Management System:** OPD and IPD transaction modules, billing and prescriptions, each with detailed reporting.
- **Doctors Hub:** Online doctor appointment platform with modules for doctors, patients, hospitals, labs and pharmacies, plus an admin panel.
- **Fine Transport:** Transport operations system for drivers, vehicles, routes, trips and expenses, with driver and customer panels, reporting and role-based permissions.
- **Stock Keeper:** Inventory system for purchases and stock usage, with a dashboard of the most consumed and purchased items and per-module reports.
